DETAILED ACTION

Claims 1-16 and 50-52 are pending in the instant application and are subject to the following election of species requirement.

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows: the various structurally different species of claim 1

(i.e. a compound of the structure

is structurally different than a

compound of the structure

). See claim 1.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner: claims 2-16 and 50-52 do not include species which consist of a fused ring

system (i.e.) as in claim 1.

The following claim(s) are generic: claims 1-16 and 50-52.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: a compound of the

structure is structurally different than a compound of the structure

, and these two compounds are, therefore, different species or they lack the same core structure or special technical feature.
